

GREENSYSTEM[®]

What is GreenSystem?

GreenSystem is ChemStation's sustainable line of products combined with a delivery method that reduces the health and environmental impacts compared to similar products and services used for the same purpose.

The ChemStation system has remained the same since 1977...providing custom-formulated, environmentally friendly industrial cleaning and process chemicals delivered into refillable containers. Being "green" is nothing new to us.

To further minimize and reduce negative impact on the environment, we have developed a line of GreenSystem products, specifically formulated to:

- Clean without harming the environment
- Use environmentally-preferred, biodegradable products that perform equally as well and are as cost-effective as their traditional counterparts
- Reduce unnecessary hazardous cleaning chemical exposures on health and the environment
- Provide a concentrated product combined with dilution control to help reduce waste and chemical contact for improved worker safety

Products

Each GreenSystem product is manufactured locally to meet the following formulation criteria:

- VOC-compliant
- Contain biodegradable detergents
- No chlorine bleach or ammonia
- No alkylphenol ethoxylates
- No 2-butoxyethanol
- No hazardous air pollutants
- No flammable solvents
- Non-DOT-corrosive
- No carcinogens
- No phosphates

Refillable Delivery

Your custom-formulated product is delivered into a refillable container (not a disposable package) that we place at your site.

ChemStation's path to sustainability involves the development of our products and our system of delivery – meeting the needs of today with care and concern for the natural resources that are necessary for future generations.

What it means to you...

We provide you a refillable container... deliver the GreenSystem product right where it is needed...you eliminate drums, disposal, and employee handling.

At ChemStation we don't just say we're green, we prove it. REFILL...NOT LANDFILL is not just a motto.

Every year ChemStation:

- Prevents more than 250,000 drums/containers from making it to the landfills
- Eliminates 2,000 tons of high-density polyethylene from entering landfills
- Saves 2,000 tons of carbon dioxide from the environment by using refillable tanks

By offering environmentally friendly products to our customers we help you live up to your green initiatives.

ChemStation – products and services known for their effectiveness, safety, and regard for the environment.

**The ChemStation Formula...
Product + Delivery = GreenSystem**
